

The new INVENTOR MECHANICS series has a thematic approach with multi model capabilities, featuring an impressive main model. A new library of patent-pending components has been added to the ENGINO® system which enhances both aesthetics and technical features. These parts include high-precision wheels, mechanisms and snap-fit curved surfaces. The smaller sets in the series are suitable for 7 year olds, while older children are challenged with the bigger sets which include also a geared motor. The top of range steps-up the complexity with Robotics technology, Bluetooth connectivity and software control.
